Change in Asset Allocation Pattern/ Portfolio Rebalancing

Short Term Defensive Consideration

As an index linked scheme, the investment policy is primarily passive management. However, as the above mentioned investment pattern is indicative and subject to the SEBI (MF) Regulations and Circulars issued thereunder, the same may vary from time to time. As per clause 1.9.1.b of Master Circular, the Fund Manager, may deviate from the above investment pattern for short term period on defensive considerations. The same will be rebalanced within 7 Calendar Days.

Portfolio Replication/ Rebalancing norms

As per clause 4.5.5 of Master Circular:

- any transactions undertaken in the scheme portfolio in order to meet the redemption and subscription obligations shall be done while ensuring that post such transactions replication of the portfolio with the index is maintained at all points of time.
- in case of change in constituents of the index due to periodic review, the portfolio of the Scheme shall be rebalanced within 7 calendar days or such other timeline as may be prescribed by SEBI from time to time.

Tracking Error:

The Scheme, in general, will hold all the securities that constitute the Underlying Index in the same proportion as the index. Expectation is that, over a period of time, the tracking error of the Scheme relative to the performance of the Underlying Index will be relatively low.

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error is not expected to exceed by 2.00% p.a. (based on daily rolling returns for last 12 months). However, in case of unavoidable events like, Dividend issuance by constituent members, rights issuance by constituent members, and market volatility during rebalancing of the portfolio following the rebalancing of the Underlying Basket, etc. or in abnormal market circumstances, the tracking error may exceed the above mentioned limits and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any.

Timelines for deployment of Funds collected during New Fund Offer (NFO) period

In accordance with clause 7.24 of Master Circular read with SEBI Letter to AMFI dated August 13, 2026, the portfolio construction based on the scheme's asset allocation shall begin on the date of allotment of units and the AMC shall deploy the funds garnered during the NFO within 30 Business Days from the date of allotment of units.

In an exceptional case, if the AMC is not able to deploy the funds as per the aforesaid timeline, justification in writing, including details of efforts taken to deploy the funds shall be placed before the Investment Committee of the AMC.

The Investment Committee, after examining the root cause for delay in deployment, may extend the timeline by 30 Business Days. The Investment Committee shall also recommend on how to ensure deployment within 30 Business Days going forward and monitor the same. However, an extension shall not be granted if the Scheme's assets are liquid and readily available.

In case the funds are not deployed as per the aforesaid mandated plus extended timelines, the AMC shall follow the requirements specified under the aforesaid circular including reporting the deviation to Trustees at each stage.

The Trustees shall monitor the deployment of funds collected in NFO and take steps, as may be required, to ensure that the funds are deployed within a reasonable timeframe.

7. Investment Strategy

HDFC FTSE India Equity ETF will invest in stocks comprising the Underlying Index and endeavor to track the benchmark index. The Scheme may also invest in debt & money market instruments, in compliance with regulations to meet liquidity and expense requirements. HDFC FTSE India Equity ETF endeavors to invest in stocks forming part of the Underlying Index in the same ratio as per the index to the extent possible and to that extent follows a passive investment strategy, except to the extent of meeting liquidity and expense requirements.

Since the Scheme is an exchange traded fund, it will only invest in securities constituting the Underlying Index. However, due to corporate action in companies comprising the index, the Scheme may be allocated/allotted securities which are not part of the index. Such holdings would be rebalanced within 7 Business Days from the date of allotment/listing of such securities. As part of the Fund Management process, the Scheme may use derivative instruments such as index futures and options, or any other derivative instruments that are permissible or may be permissible in future under applicable regulations. However, trading in derivatives by the Scheme shall be for restricted purposes as permitted by the Regulations.

For detailed derivative strategies, please refer to SAI. For exposure limits to derivatives, refer section 'Where will the scheme invest' under Section II, Part II, Clause A

Though every endeavour will be made to achieve the objective of the Scheme, the AMC/Sponsor/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

8. Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

Scheme Specific Risk Factors

The Scheme is subject to the specific risks that may adversely affect the Scheme's NAV, return and / or ability to meet its investment objective.

The specific risk factors related to the Scheme include, but are not limited to the following:

(i) Risk Factors associated with Exchange Traded Schemes:

a. Passive Investments:

- As the Scheme proposes to invest not less than 95% of the net assets in the securities of the Underlying Index in the same proportion, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.
- Performance of the Underlying Index will have a direct bearing on the performance of the Scheme. In the event the Underlying Index, is dissolved or is withdrawn or is not published due to any reason whatsoever, the Trustee reserves the right to modify the Scheme so as to track a different and suitable index or to suspend tracking the Underlying Index till such time it is not published and appropriate intimation will be sent to the Unit holders of the Scheme. In such a case, the investment pattern will be modified suitably to match the composition of the securities that are included in the new index to be tracked and the Scheme will be subject to tracking error during the intervening period.

Further, it is pertinent to note that there is no element of research recommendations involved before the execution of trades in the Scheme. The decision of the Fund Manager to execute trades including rebalancing required will be purely driven by the inflows and outflows in the Scheme and composition of the Underlying Index.

b. Tracking Error Risk/Tracking Difference Risk:

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the Underlying Index due to certain factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the Underlying Index and regulatory policies which may affect AMC's ability to achieve close correlation with the Underlying Index of the Scheme. The Scheme's returns may therefore deviate from those of its Underlying Index. Tracking Error" is defined as the standard deviation of the difference in daily returns between the Scheme and the Underlying Index annualized over 1 year period. Tracking difference is the difference of returns between the Scheme and the index annualized over 1 year, 3 year, 5 year, 10 year and since the scheme inception period. Tracking Error may arise including but not limited to the following reasons.

- a. Expenditure incurred by the Scheme.
- b. The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses. The Scheme may not be invested at all times as it may keep a portion of the funds in cash to meet redemptions or for corporate actions.
- c. Securities trading may halt temporarily due to circuit filters.
- d. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc.
- e. Rounding off of quantity of shares in Underlying Index.
- f. Dividend received from underlying securities.
- g. Disinvestments by Scheme to meet redemptions, recurring expenses, etc.
- h. Execution of large buy/sell orders.
- i. Transaction cost (including taxes and insurance premium), recurring expenses and other expenses, such as but not limited to brokerage, custody, trustee and investment management fees.
- j. Realisation of Unit holders' funds.
- k. The Scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to: circuit filters in the securities, liquidity and volatility in security prices.
- l. The Index reflects the prices of securities at a point in time, which is the price at close of business day on BSE/National Stock Exchange of India Limited (NSE). The Scheme, however, may at times trade these securities at different points in time during the trading session and therefore the

prices at which the Plan trade may not be identical to the closing price of each scrip on that day on the BSE/NSE. In addition, the Scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance, from BSE/NSE closing prices.

- m. In case of investments in derivatives like index futures, the risk reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future. Further, there could be an element of settlement risk, which could be different from the risk in settling physical shares and there is a risk attached to the liquidity and the depth of the index futures market as it is relatively new market.

It will be the endeavour of the fund manager to keep the tracking error as low as possible. Under normal circumstances, such tracking error is not expected to exceed 2% per annum for daily 12 month rolling return. However, in case of corporate action events like, Dividend received from underlying securities, rights issue from underlying securities or market events like circuit filters in the securities and market volatility during rebalancing of the portfolio following the rebalancing of the Underlying Index, etc. or in abnormal market circumstances, the tracking error may exceed the above limits. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index.

c. Stock Liquidity in the event of Circuit Filter

Liquidity of stocks which are available only in cash segment and not in F&O segment gets adversely impacted in the event of a circuit filter imposed by any of the stock exchanges. This would also impact the subscription and redemption of ETF units, directly done with the Fund and the same will be dealt with in the manner described below. Further, this may result in gain/loss to existing unit holders when finally the purchase/sale of that stock is executed. This would also create tracking error while comparing returns with benchmark.

Transaction type	Upper circuit	Lower circuit
Subscription	The Scheme shall buy stocks <u>as per basket</u> wherever no circuit. In case of Circuit on any stock(s) in the basket, the Scheme shall: 1. Hold cash for stock(s) on circuit at the latest available price on the stock exchange when the circuit was triggered 2. Buy the stock(s) immediately when circuit is open. This may impact performance and result in tracking error.	NA
Redemption	NA	The Scheme shall sell stocks <u>as per basket</u> if no circuit. In case of circuit on Stock(s) in the basket, the Scheme shall: 1. Pay from cash or cash equivalent or create cash to pay for stocks on circuit at the latest available price on the stock exchange when the circuit was triggered by selling other stocks which may impact performance and result in tracking error; 2. Sell stock immediately when circuit is open and re-balance portfolio which may impact performance and result in tracking error.

d. Market Trading Risks:

- i. **Absence of Prior Active Market:** Although the Scheme is listed on NSE and/or BSE, there can be no assurance that an active secondary market will develop or be maintained. Hence there could be a time when trading in the Units of the Scheme would be infrequent.
- ii. **Trading in Units may be halted:** Trading in the units of the Scheme on NSE/BSE may be halted because of market conditions such as extraordinary market volatility and pursuant to stock exchange(s) and SEBI 'circuit filter' rules, etc or for reasons that in view of NSE/BSE or SEBI, trading in the units of the Scheme is not advisable.

There can be no assurance that the requirements of NSE/BSE necessary to maintain the listing of the units of the Scheme will continue to be met or will remain unchanged.

iii. **Units of the Scheme may trade at prices other than NAV:** The units of the Scheme may trade above or below their NAV. The NAV of the Scheme will fluctuate with changes in the market value of the Scheme's holdings. The trading prices of the units of the Scheme will fluctuate in accordance with changes in their NAV as well as market supply and demand for the units of the Scheme. However, given that units of the Scheme can be created and redeemed in creation units directly with the Fund, it is expected that large discounts or premiums to the NAV of units of the Scheme will not sustain due to arbitrage opportunity available.

iv. **Regulatory Risk:** Any changes in trading regulations by the Stock Exchange(s)/SEBI may affect the ability of market maker to arbitrage resulting into wider premium/discount to NAV.

e. Redemption Risk:

Investors should note that even though the Scheme is an open ended Scheme, subscription/redemptions directly with the Fund would be limited to such investors who have the ability to subscribe/redeem the units of the Scheme in Creation Unit size (except in certain exception circumstances mentioned in the SID). Generally, these lot sizes are larger as compared to normal funds. Thus, even though this Scheme is open ended, due to large lot size, very few investors can directly subscribe and redeem the units of the Scheme. However, investors wishing to subscribe/redeem units in other than Creation Unit size can do so by buying/selling the same on NSE/BSE.

f. The units will be issued only in demat form through depositories. The records of the depository are final with respect to the number of units available to the credit of unit holder. Settlement of trades, repurchase of units by the Mutual Fund depends up on the confirmations to be received from depository(ies) on which the Mutual Fund has no control.

(ii) Risk factors associated with investing in equities and equity related instruments

- **Price Risk:** Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis owing to market movements. The extent of fall or rise in the prices is a fluctuation in general market conditions, factors and forces affecting capital market, Real Estate and Infrastructure sectors, level of interest rates, trading volumes, settlement periods and transfer procedures. Investments in equity shares and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.
- **Interest Rate Risk:** Securities/Instruments of REITs run interest rate risk. Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.
- **Credit Risk:** Credit risk means that the issuer of a REITs security/instrument may default on interest payment or even on paying back the principal amount on maturity. Securities/Instruments of REITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.
- **Liquidity Risk:** Securities/instruments, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges. Investment in such securities may lead to increase in the scheme portfolio risk. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.
- **Reinvestment Risk:** Investments in securities/instruments of REITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or Dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- **Legal and Regulatory Risk:** The regulatory framework governing investments in securities/instruments of REITs comprises a relatively new set of regulations and is therefore untested, interpretation and enforcement by regulators and courts involves uncertainties. Presently, it is difficult to forecast as to how any new laws, regulations or standards or future amendments will affect the issuers of REITs and the sector as a whole. Furthermore, no assurance can be given that the regulatory system will not change in a way that will impair the ability of the Issuers to comply with the regulations, conduct the business, compete effectively or make distributions.
- Scheme's performance may differ from the benchmark index to the extent of the investments held in the debt segment, as per the investment pattern indicated under normal circumstances.

(iii) Risk factors associated with investing in Fixed Income Securities

- The Net Asset Value (NAV) of the Scheme, to the extent invested in Debt and Money Market instruments, will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.

- Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.
- Investment in Debt instruments are subject to varying degree of credit risk or default (i.e. the risk of an issuer's inability to meet interest or principal payments on its obligations) or any other issues, which may have their credit ratings downgraded. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security values. This may increase the risk of the portfolio. The Investment Manager will endeavour to manage credit risk through in-house credit analysis.
- **Prepayment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the Scheme to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the Scheme.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- **Settlement risk:** Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio, due to the absence of a well developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio.
- Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, AAA rated bonds are comparatively less risky than AA rated bonds.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates and are subject to issuer default risk. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.

(iv) Risks associated with investment in unlisted securities

- Except for any security of an associate or group company, the scheme can invest in securities which are not listed on a stock exchange ("unlisted Securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted debt securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.
- Investment in unrated instruments may involve a risk of default or decline in market value higher than rated instruments due to adverse economic and issuer-specific developments. Such investments display increased price sensitivity to changing interest rates and to a deteriorating economic environment. The market values for

unrated investments tends to be more volatile and such securities tend to be less liquid than rated debt securities.

(v) Risk factors associated with investment in Tri-Party Repo

The mutual fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; Thus, reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL).

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus, the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

(vi) Risk factors associated with investing in Derivatives

- The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include, the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- Credit Risk:**
The credit risk in derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.
- Market Risk:**
Market movements may adversely affect the pricing and settlement of derivatives.
- Illiquidity risk:**
This is the risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

(vii) Risk factors associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The scheme may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

(viii) General Risk factors

- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.

- Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.
- The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
