7. Investment Strategy

The primary objective of the Scheme is to generate income through investments in Debt / Money Market Instruments and Government Securities maturing on or before the maturity date of the Scheme.

The Scheme has the flexibility to invest in the entire range of debt instruments The Scheme may also seek investment opportunity in the Foreign Debt Securities, in accordance with guidelines stipulated in this regard by SEBI and RBI from time to time. Investments in debt and money market instruments would be undertaken after assessing the associated credit risk, interest rate risk and liquidity risk within the limits in the Asset Allocation table of the Scheme, subject to permissible limits laid under SEBI (MF) Regulations.

As part of the Fund Management process, the Scheme may use derivative instruments as permitted by extant regulations. For detailed derivative strategies, please refer to SAI. For exposure limits to derivatives, refer section 'Where will the scheme invest' under Section II, Part II, Clause A in the SID.

Though every endeavour will be made to achieve the objective of the Scheme, the AMC/Sponsor/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

8. Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

(i) Scheme Specific Risk Factors:

Being a close-ended scheme, no redemptions are allowed prior to scheduled maturity of the Scheme. Investors who wish to exit/redeem before the scheduled maturity date may do so through the stock exchange mode. For the Units listed on the exchange, it is possible that the market price at which the Units are traded may be at a discount to the NAV of such Units. Hence, Unit holders who sell their Units in the Scheme prior to maturity may not get the desired returns. Moreover, given the nature of the Scheme, the AMC may be required to liquidate the equity portfolio and the proceeds may be kept in cash and invested largely in cash equivalents/money market instruments towards the Maturity/Final Redemption date and to that extent these investments made may not be in line with the asset allocation pattern.

A close ended scheme comes to an end at the scheduled maturity. On the scheduled maturity date, investors carry the risk that the value of underlying portfolio securities on the maturity date of the Scheme could get impacted by unfavorable market conditions and/or company specific events, which could lead to lower than desired returns.

Treatment and disposal of illiquid securities or securities classified as default at the time of maturity / closure of schemes shall be in terms of clause 15.8 of Master Circular which states as under: "In case of close-ended schemes, some of the investments made by Mutual Funds may become default at the time of maturity of schemes. Further, at the time of winding up of a scheme, some of the investments made by Mutual Funds may become default or illiquid. In due course of time i.e. after the maturity or winding up of the schemes, such investments may be realised by the Mutual Funds. It is advised to distribute such amount, if it is substantial, to the concerned investors. In case the amount is not substantial, it may be used for the purpose of investor education. The decision as to the determination of substantial amount shall be taken by the Trustees of Mutual Funds after considering the relevant factors including number of investors, amount recovered, cost of transferring funds to investors; among others."

(ii) Risk factors associated with investing in Fixed Income Securities:

- The Net Asset Value (NAV) of the Scheme, to the extent invested in Debt and Money Market instruments, will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.
- Investment in Debt instruments are subject to varying degree of credit risk or default (i.e. the risk of an issuer's inability to meet interest or principal payments on its obligations) or any other issues, which may have their credit ratings downgraded. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security values. This may increase the risk of the portfolio. The Investment Manager will endeavour to manage credit risk through in-house credit analysis.
- **Prepayment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the Scheme to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the Scheme.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- **Settlement risk:** Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio, due to the absence of a well developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio.
- Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, AAA rated bonds are comparatively less risky than AA rated bonds.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates and are subject to issuer default risk. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.

(iii) Risks associated with investment in unlisted securities:

- Except for any security of an associate or group company, the scheme can invest in securities which are not listed on a stock exchange ("unlisted Securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted debt securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise their investments in unlisted securities at a fair value.
- Investment in unrated instruments may involve a risk of default or decline in market value higher than rated instruments due to adverse economic and issuer-specific developments. Such investments display increased price sensitivity to changing interest rates and to a deteriorating economic environment. The market values for unrated investments tends to be more volatile and such securities tend to be less liquid than rated debt securities.

(iv) Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities

- The risks factors stated below for the Structured Obligations & Credit Enhancement are in addition to the risk factors associated with debt instruments.
- Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer.
- Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme

to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.

- **Credit Risk:** The credit risk of debt instruments which are CE rated is based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore, apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

(v) Risk factors associated with investing in Overseas Securities

- **Currency Risk:**

  Moving from Indian Rupee (INR) to any other currency entails currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.

- **Interest Rate Risk:**

  The pace and movement of interest rate cycles of various countries, though loosely co-related, can differ significantly. Hence by investing in securities of countries other than India, the Scheme stand exposed to their interest rate cycles.

- **Taxation Risk:**

  In addition to the disclosure related to taxation mentioned in Statement of Additional Information (SAI) under section "Tax, Legal, General Information", Investment in Foreign Securities poses additional challenges based on the tax laws of each respective country or jurisdiction. The scheme may be subject to a higher level of taxes than originally anticipated and or dual taxation.

  The Scheme may be subject to withholding or other taxes on income and/or gains arising from its investment portfolio. Further, such investments are exposed to risks associated with the changing / evolving tax / regulatory regimes of all the countries where the Scheme invests. All these may entail a higher outgo to the Scheme by way of taxes, transaction costs, fees etc. thus adversely impacting its NAV; resulting in lower returns to an Investor.

- **Legal and Regulatory Risk:**

  Legal and regulatory changes could occur during the term of the Scheme which may adversely affect it. If any of the laws and regulations currently in effect should change or any new laws or regulations should be enacted, the legal requirements to which the Scheme and the investors may be subject could differ materially from current requirements and may materially and adversely affect the Scheme and the investors. Legislation/ Regulatory guidelines could also be imposed retrospectively.

- **Country Risk:**

  The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

  To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

- **Exhaustion of Limit for investments in Overseas Securities:**

  In case the permissible limits for investments in overseas Securities by the Scheme provided by regulatory bodies is reached, then the scheme may not be able to make any further investments in permissible Overseas Securities. This could lead to loss of investment opportunity.

(vi) Risk factors associated with investing in Derivatives

- The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include, the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- **Credit Risk:**

  The credit risk in derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.

- **Market Risk:**

  Market movements may adversely affect the pricing and settlement of derivatives.

- **Illiquidity risk:**

  This is the risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

- **Additional Risk viz. Basis Risk associated with imperfect hedging using Interest Rate Futures (IRF):** The imperfect correlation between the prices of securities in the portfolio and the IRF contract used to hedge part of the portfolio leads to basis risk. Thus, the loss on the portfolio may not exactly match the gain from the hedge position entered using the IRF.

(vii) Risk factors associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The scheme may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

(viii) Risk factors associated with investing in Securitised Debt

The Risks involved in Securitised Papers described below are the principal ones and does not represent that the statement of risks set out hereunder is exhaustive.

- **Limited Liquidity & Price Risk**

  There is no assurance that a deep secondary market will develop for the Certificates. This could limit the ability of the investor to resell them.

- **Limited Recourse, Delinquency and Credit Risk**

  The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts to the Certificate Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Asset. However, many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realise the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

- **Risks due to possible prepayments and Charge Offs**

  In the event of prepayments, investors may be exposed to changes in tenor and yield. Also, any Charge Offs would result in the reduction in the tenor of the Pass Through Certificates (PTCs).

- **Bankruptcy of Bank with Liquidity facility**

  If the Bank with Liquidity facility, becomes subject to bankruptcy proceedings then an investor could experience losses or delays in the payments.

- **Risk of Co-mingling**

  With respect to the Certificates, the Servicer will deposit all payments received from the Obligors into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of originator. If originator in its capacity as Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss.

(ix) Risk factors associated with Repo in permitted Corporate Debt Securities

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo in corporate debt securities is economically similar to a secured

loan, with the buyer receiving corporate debt securities as collateral to protect against default. Some of the risks associated with repo in corporate debt are given below:

Counterparty Risk: Counterparty risk refers to the inability of the seller to meet the obligation to buy back securities at the contracted price on the contracted date. In case of over the counter (OTC) repo trades, the investment manager will endeavour to manage counterparty risk by dealing only with counterparties having strong credit profiles. Also, the counter-party risk is to an extent mitigated by taking collateral equivalent in value to the transaction after knocking off a minimum haircut on the intrinsic value of the collateral. In the event of default by the repo counterparty, the scheme shall have recourse to the corporate debt securities. In case the repo transaction is executed on exchange platform approved by RBI/SEBI, the exchange may also provide settlement guarantee.

Collateral Risk: Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk can be partly mitigated by restricting participation in repo transactions only in corporate debt securities which are approved by credit risk team. Additionally, to address the risk related to reduction in market value of corporate debt security held as collateral due to credit rating downgrade, the repo contract can incorporate either an early termination of the repo agreement or call for fresh margin to meet the minimum haircut requirement or call for replacement of security with eligible security. Moreover, the investment manager may apply a higher haircut on the underlying security than required as per RBI/SEBI regulation to adjust for the illiquidity and interest rate risk on the underlying instrument. To mitigate the risk of price reduction due to interest rate changes, the adequacy of the collateral can be monitored on a daily basis by considering the daily market value & applying the prescribed haircut. The fund manager or the exchange can then arrange for additional collateral from the counterparty, within a prespecified period. If the counterparty is not able to top-up either in form of cash / collateral, it would tantamount to early termination of the repo agreement, and the outstanding amount can be recovered by sale of collateral.

(x) Risk factors associated for investments in Mutual Fund Schemes:

1. Movements in the Net Asset Value (NAV) of these Schemes may impact the performance. Any change in the investment policies or fundamental attributes of these Schemes will affect the performance of the Scheme to the extent of investment in such schemes.
2. Redemptions by in these Schemes would be subject to applicable exit loads.

(xi) General Risk factors:

- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
- As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme. In view of the above, the Trustee has the right, in its sole discretion, to limit redemptions (including suspending redemptions) under certain circumstances, as described under section Right to Restrict Redemption and / or Suspend Redemption of the units.
- At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities / investments amounting to substantial reduction in the earning capability of the Scheme. The Scheme may retain certain investments in cash or cash equivalents for its day-to-day liquidity requirements.
- Investment strategy to be adopted by the Scheme may carry the risk of significant variance between the portfolio allocation of the Scheme and the Benchmark particularly over a short to medium term period.
- Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.
- The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.

For details on risk mitigation measures, please refer SID.

9. Plans/ Options

Plans: Regular & Direct

Both Plans offer only Payout of Income Distribution cum Capital Withdrawal (IDCW) Option

Under this Option, it is proposed to declare income / capital Distribution (IDCW) subject to availability of distributable surplus, as computed in accordance with SEBI (MF) Regulations. Investors should note that distributions can be made out of Equalization Reserves (representing accumulated realized gains), which is part of sale price paid by them.

The Scheme may declare distribution (i.e. Payout of IDCW) at half yearly frequency, subject to availability of distributable surplus. However, there is no guarantee or assurance on the half yearly frequency of distribution or the quantum of distribution.

- This Option offers following sub-options:
  - 50% IDCW Donation Option (Default)
  - 75% IDCW Donation Option

Donation will be made to Indian Cancer Society (ICS) or any other eligible institution(s) for treatment of cancer as may be decided by the Board of Directors of AMC and Trustee. The amount of Donation will be calculated as a % of Gross IDCW i.e. before deduction of TDS/ Statutory levies.

For detailed disclosure on default plans and options, kindly refer SAI.

10. Applicable NAV

The below cut-off timings and applicability of NAV shall be applicable in respect of valid applications received at the Official Point(s) of Acceptance on a Business Day:

For Purchases including switch-ins

The Units of the Scheme will not be available for subscriptions / switch- in after the closure of NFO Period.

For Redemptions including switch-outs

Units of the Scheme cannot be redeemed including switch-outs by the investors directly with the Fund until the date of Maturity/ Final Redemption. Therefore, the provisions of Cut off timing for redemptions including switch-outs will not be applicable to the Scheme.

Units of the Scheme will be compulsorily redeemed on the Maturity / Final Redemption date, except requests for switch-out received by the Fund.

Settlement of Purchase/Sale of Units of the Scheme on NSE / BSE

Buying/Selling of Units of the Scheme on NSE / BSE is just like buying/selling any other normal listed security. If an investor has bought Units, an investor has to pay the purchase amount to the broker/sub- broker such that the amount paid is realized before the funds pay-in day of the settlement cycle on the NSE / BSE. If an investor has sold Units, an investor has to deliver the Units to the broker/sub-broker before the securities pay-in day of the settlement cycle on the NSE / BSE. The Units (in the case of Units bought) and the funds (in the case of Units sold) are paid out to the broker on the pay-out day of the settlement cycle on the NSE / BSE. The NSE / BSE regulations stipulate that the trading member should pay the money or Units to the investor within 24 hours of the pay-out.

If an investor has bought Units, he should give standing instructions for 'Delivery- In' to his/her Depository Participant (DP) for accepting Units in his/her beneficiary account. An investor should give the details of his/her beneficiary account and the DP- ID of his/her DP to his/her trading member. The trading member will transfer the Units directly to his/her beneficiary account on receipt of the same from NSE's Clearing Corporation / BSE's Clearing Corporation.

An investor who has sold Units should instruct his/her DP to give 'Delivery Out' instructions to transfer the Units from his/her beneficiary account to the Pool Account of his/her trading member through whom he/she have sold the Units. The details of the Pool A/C (CM-BP-ID) of his/her trading member to which the Units are to be transferred, Unit quantity etc. should be mentioned in the Delivery Out instructions given by him/her to the DP.

The instructions should be given well before the prescribed securities pay-in day. SEBI has advised that the Delivery Out instructions should be given at least 24 hours prior to the cut-off time for the prescribed securities pay-in to avoid any rejection of instructions due to data entry errors, network problems, etc.

Rolling Settlement

The pay-in and pay-out timelines for funds and securities are prescribed as per the Settlement Cycle. The Pay-in and Pay-out of funds and the Units will take place within 1 working day after the trading date. A typical Settlement Cycle of Rolling Settlement is given below:

Day Activity

T	The day on which the transaction is executed by a trading member
T + 1	Confirmation of all trades including custodial trades by 7.30 a.m.
T + 1	Processing and downloading of obligation files to brokers/custodians by 1.00 p.m.
T + 1	Pay-in of funds and securities by 10:50 am for Funds & 10:30 am for Securities
T + 1	Pay out of funds and securities by 3 pm / as and when received from exchange

While calculating the days from the Trading day (Day T), weekend days (i.e. Saturday and Sundays) and bank holidays are not taken into consideration.

The AMC has the right to amend cut off timings subject to SEBI (MF) Regulations for the smooth and efficient functioning of the Scheme.

Transactions through online facilities / electronic modes:

The declaration / actual payment of IDCW and the frequency thereof will depend on the availability of distributable surplus computed in accordance with SEBI (MF) Regulations. The decision of the Trustee in this regard shall be final.

IDCW, if declared, will be paid (subject to deduction of tax at source, if any) to those Unit holders whose names appear in the Register of Unit holders on the record date. Units held in account statement (non-demat) form

It is mandatory for the Investors to quote the KYC Compliance Status of each applicant (guardian in case of minor) in the application and attach proof of KYC Compliance viz. KYC Acknowledgement Letter for all purchases/ switches/ redemptions/ registrations for Systematic Investment Plan (SIP)/ Systematic Transfer Plan (STP)/Flex STP/ Flexindex Plan/ Transfer of IDCW Plan Facility ("TIP Facility"). Applicants intending to apply for units through a Power of Attorney (PoA) must ensure that the issuer of the PoA and the holder of the PoA must mention their KYC Compliance Status and attach proof of KYC Compliance at the time of investment. For cases where the KYC status is 'Under Process'/ 'In-Progress', AMC may accept the subscription/switch transactions and process the same, but keep the units 'on hold' from any further transactions till KYC status is *'Verified'*.

SEBI has introduced a common KYC Application Form for all the SEBI registered intermediaries. New investors are therefore requested to use the common KYC Application Form and carry out the KYC process including In-Person Verification (IPV) with any SEBI registered intermediaries including mutual funds. The KYC Application Forms are also available on our website www.hdfcfund.com. Existing KYC compliant investors of the Fund can continue the practice of providing KYC Acknowledgement Letter/ Printout of KYC Compliance Status downloaded from CDSL Ventures Ltd. (CVL) website (www.cvlindia.com) using the PAN at the time of investment.

Once the investor has done KYC with any SEBI registered intermediary, the investor need not undergo the same process again with the Fund provided the KYC has been done with AAdhaar as the Proof of Identity. In case, the KYC is done with any other Officially Valid Document as proof of Identity, the investor would need to undergo the KYC every time they invest with a new SEBI registered intermediary i.e. AMC. However, the Fund reserves the right to carry out fresh KYC of the investor in its discretion.

Units held in electronic (demat) form

For units held in demat form, the KYC performed by the Depository Participant of the applicants will be considered as KYC verification done by the Trustee / AMC. In the event of non compliance of KYC requirements, the Trustee/AMC reserves the right to freeze the folio of the investor(s) and effect mandatory redemption of unit holdings of the investors at the applicable NAV, subject to payment of exit load, if any.

For further details, please refer Section 'Know Your Customer (KYC) Compliance' under Statement of Additional Information available on our website www.hdfcfund.com
