

Fund Positioning

HDFC Medium Term Debt Fund invests in debt, money market and related instruments of various maturities while maintaining the Macaulay Duration of the portfolio between 3 to 4 years under normal circumstances. The Fund follows a duration management strategy by keeping a close watch on various domestic and global macro-economic variables. In light of current anticipated adverse situation due to rising US yields, debt outflows by FPI's & inflation risk tilted to upside, HDFC Medium Term Debt Fund would maintain portfolio Macaulay Duration between one & four years. The fund is ideal for those with an investment horizon of more than 12 months.

Investment Objective

To generate income / capital appreciation through investments in Debt and Money Market Instruments. There is no assurance that the investment objective of the Scheme will be achieved.

Portfolio Details (as on May 31, 2025)

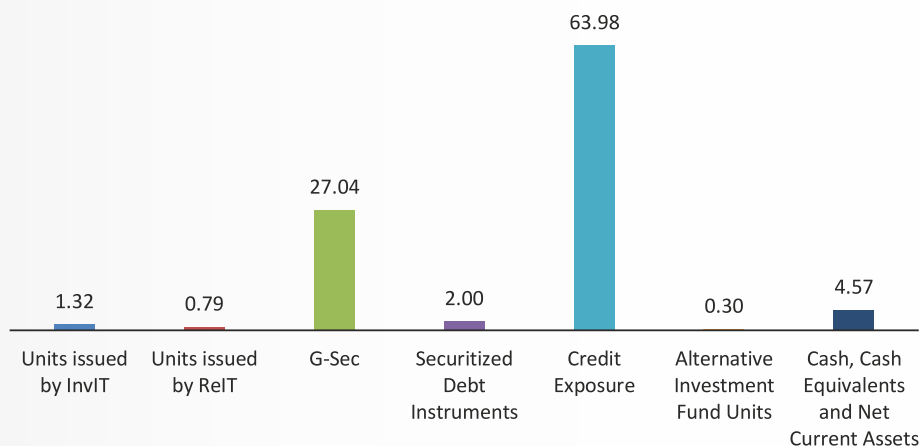

Residual Maturity*	6.15 Years
Macaulay Duration*	3.96 Years
Annualized Portfolio YTM #*	7.24 %

semi annual YTM has been annualised.

* Calculated on amount invested in debt securities (including accrued interest), deployment of funds in TREPS and Reverse Repo and net receivable/payable.

#Macaulay Duration (Duration) measures the price volatility of fixed income securities. It is often used in the comparison of interest rate risk between securities with different coupons and different maturities. It is defined as the weighted average time to cash flows of a bond where the weights are nothing but the present value of the cash flows themselves. It is expressed in years/days. The duration of a fixed income security is always shorter than its term to maturity, except in the case of zero coupon securities where they are the same.

Portfolio Classification by Asset Class (%) as on May 31, 2025
