7 Notes, Multiple Emotions!

Just like a composer's use of different combinations of 7 notes in music makes listening to music such a stress free experience...

Asset Allocation involves creating a mix of asset classes as per one's own risk appetite and tolerance to create a less stressful investment journey

Multiple Asset Classes – *One Fund*

Equity

Aims to provide growth to an investor's portfolio

Debt

Aims to provide stability to an investor's portfolio

Gold

Aims to act as a hedge against inflation and currency depreciation

How does one take exposure to these asset classes efficiently?

Fund of Funds

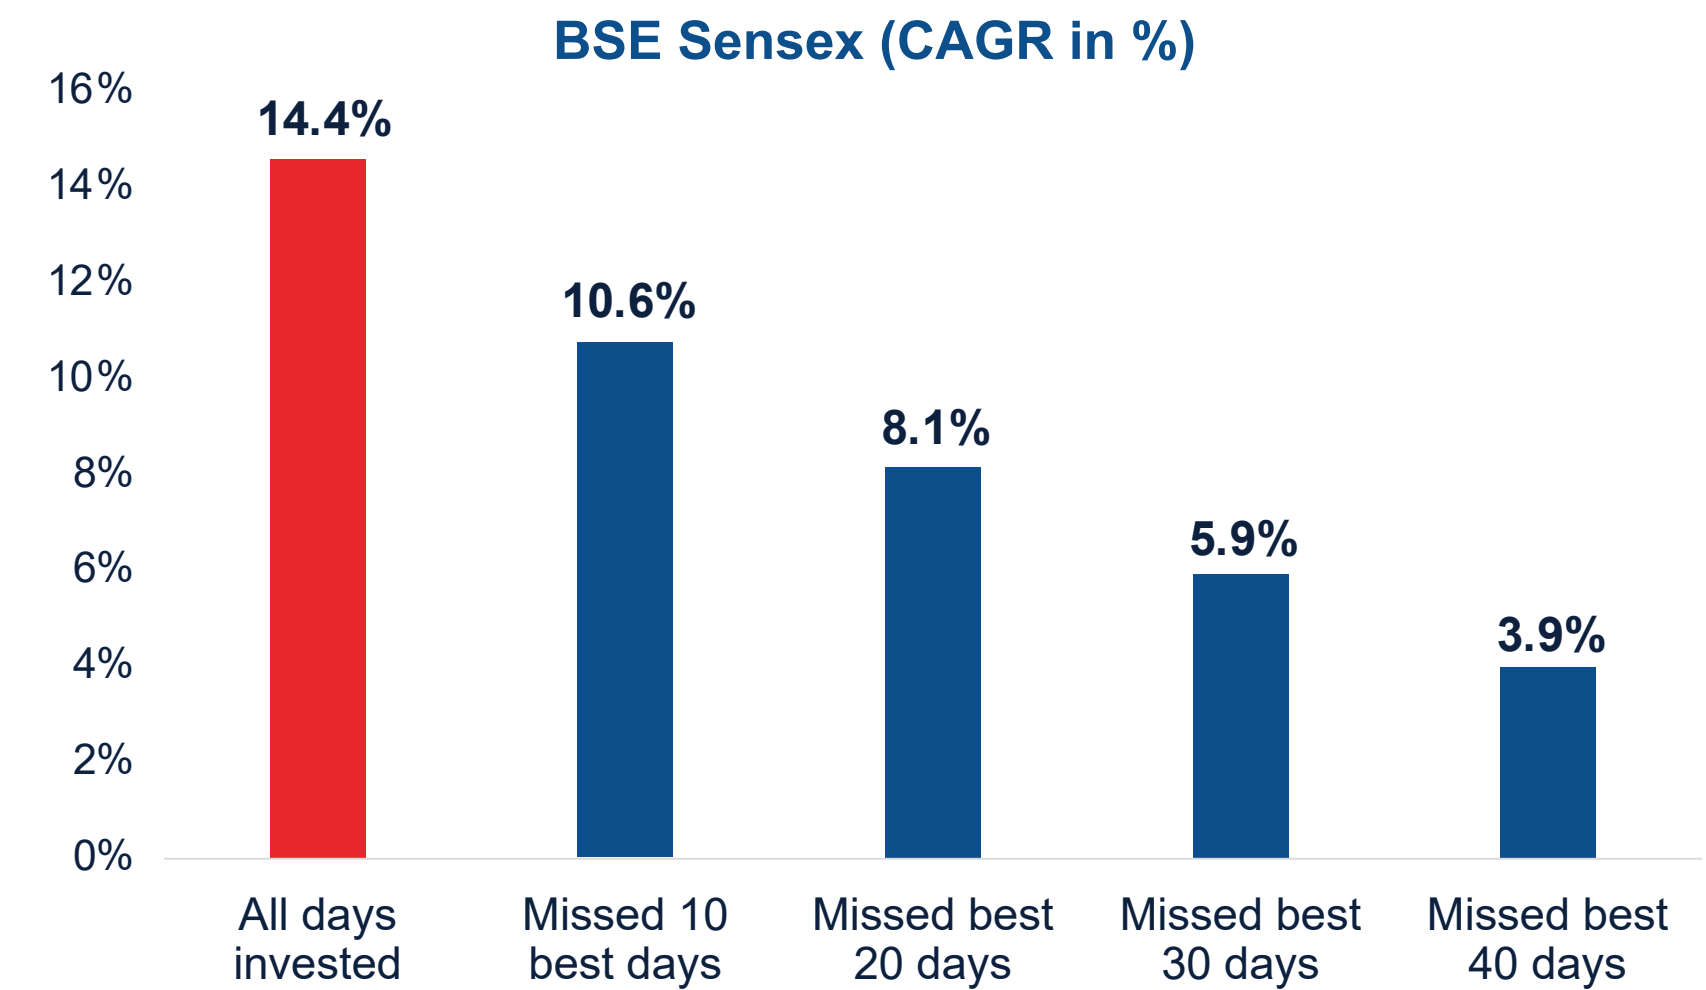

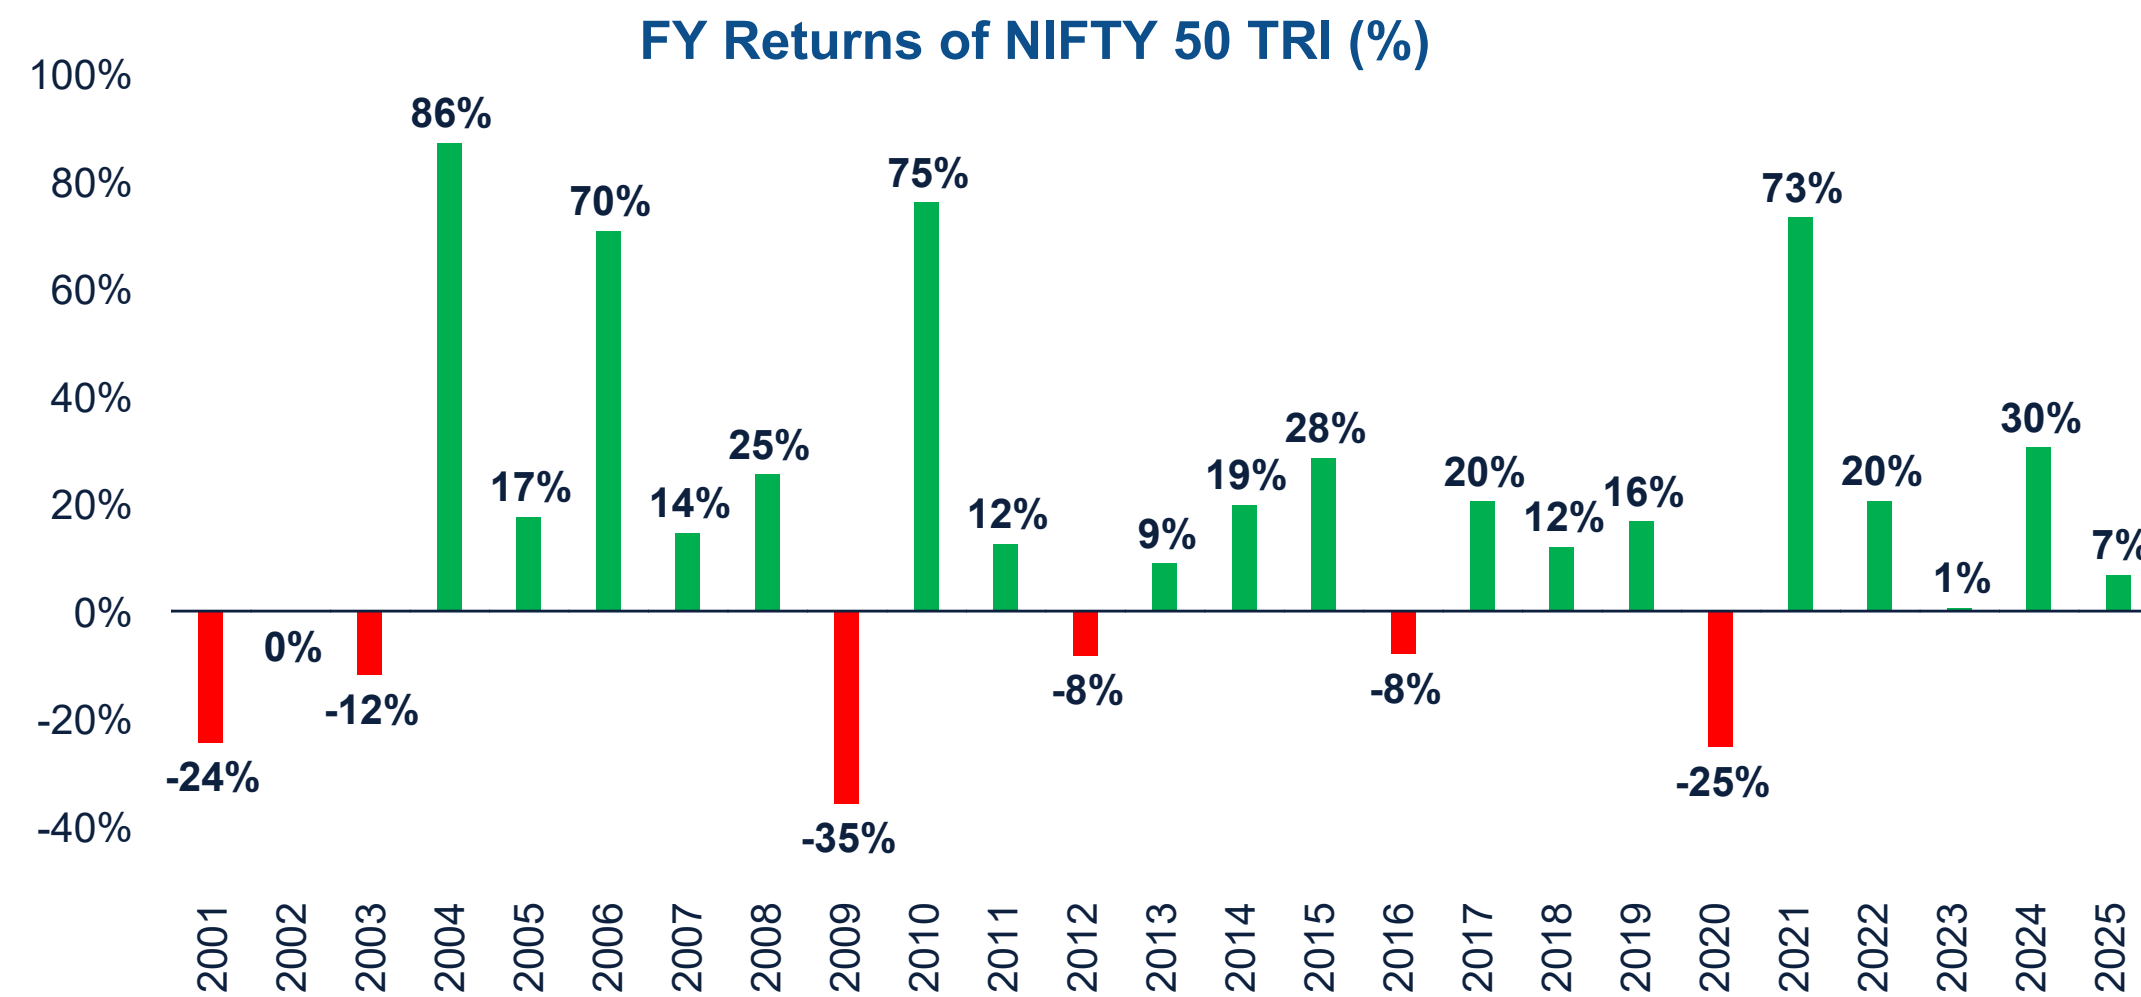

allows investors to reduce their cognitive thinking of making investment decisions by relying on the expertise of Fund Managers to take exposure to multiple mutual fund schemes / asset classes

Short Term and Emotions – A Close-knit Relationship

Last 20 years → Witness to multiple key events that have impacted equity markets in the short term

Is *timing* the Equity Markets easy?

Difficult to predict the correct entry and exit points consistently in the short term

Spending time in the markets → Key to wealth creation!

How does one ***manage downside risk?***
Combining negatively correlated assets

Negative Correlation brings “*Diversification*”

From April 2002 to October 2025	Equity	Debt	Gold
Equity	1	-0.19	-0.11
Debt	-0.19	1	0.03
Gold	-0.11	0.03	1

Combining assets with low correlation* → Ability to reduce risk and offer opportunity of generating optimal returns

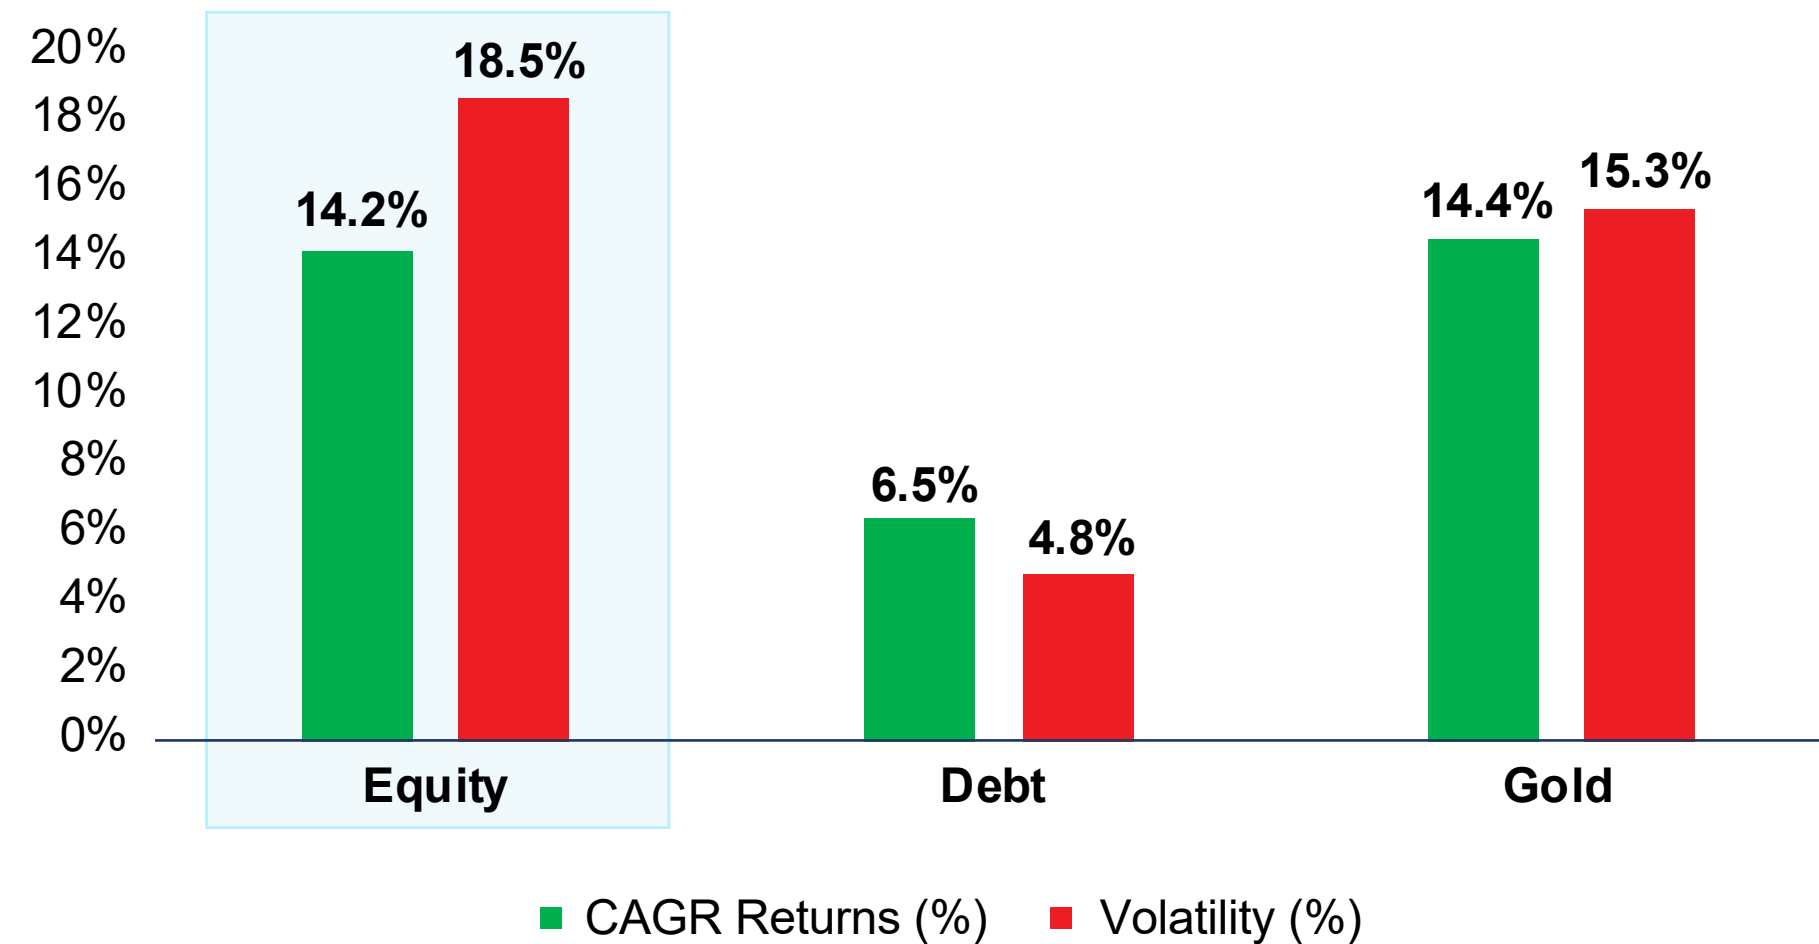

*Correlation is a measure of how asset classes move in relation to one another over a period of time

Source: www.niftyindices.com, World Gold Council. Data from April 2002 to October 2025. Data used for asset classes: Equity – NIFTY 50, Debt – NIFTY 10-year Benchmark GSec, Gold – Spot Rate /10 Grams. Comparison with Gold has been given solely for the purpose of understanding and illustrative purposes.

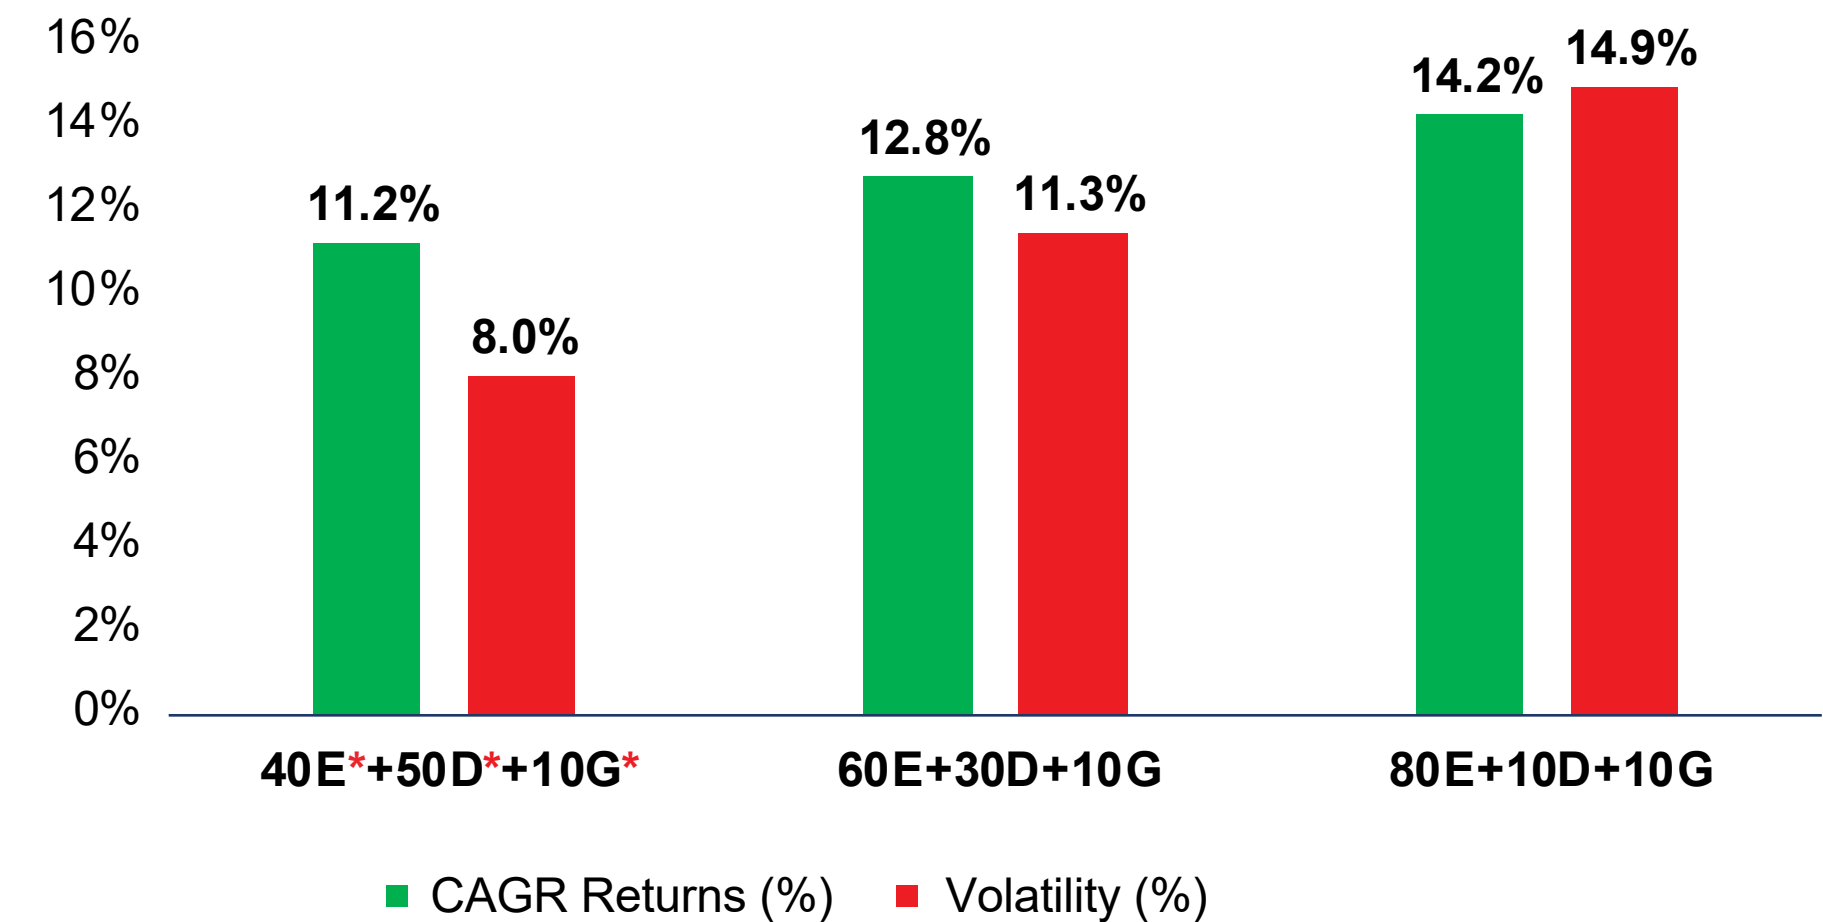

Concentrate versus Allocate?

Individual Asset Classes

VS

Asset Allocation reducing volatility!

Equity → Potential to generate higher returns versus other asset classes, but **volatility much higher**

Combining multiple asset classes improves the risk-adjusted returns for an investor

Source: www.niftyindices.com, World Gold Council. Data from March 31, 2002 to October 31, 2025. Returns are compounded annual in nature. Data used for asset classes: Equity – NIFTY 50, Debt – NIFTY 10-year Benchmark GSec, Gold – Spot Rate ₹/10 Grams. Monthly portfolio rebalancing assumed. Standard Deviation calculated using daily returns. The above analysis is based on back-testing of the above mentioned asset classes. HDFC Mutual Fund/AMC is not guaranteeing future returns of these asset classes. Comparison with Gold has been given solely for the purpose of understanding and illustrative purpose. The above combinations are for illustrative purpose. Investors are requested to take professional advice while making investment decisions. *E: Equity, D: Debt, G: Gold

Investment Approach that an Investor could follow

Need for a simple asset allocation solution that manages these 5 dimensions effectively

Fund of Funds -

The one-stop solution for managing all these dimensions with an aim to create wealth in the long term

- Aim to invest, predominantly, in schemes with exposure mostly to issuers with high credit quality, and take controlled interest rate risk

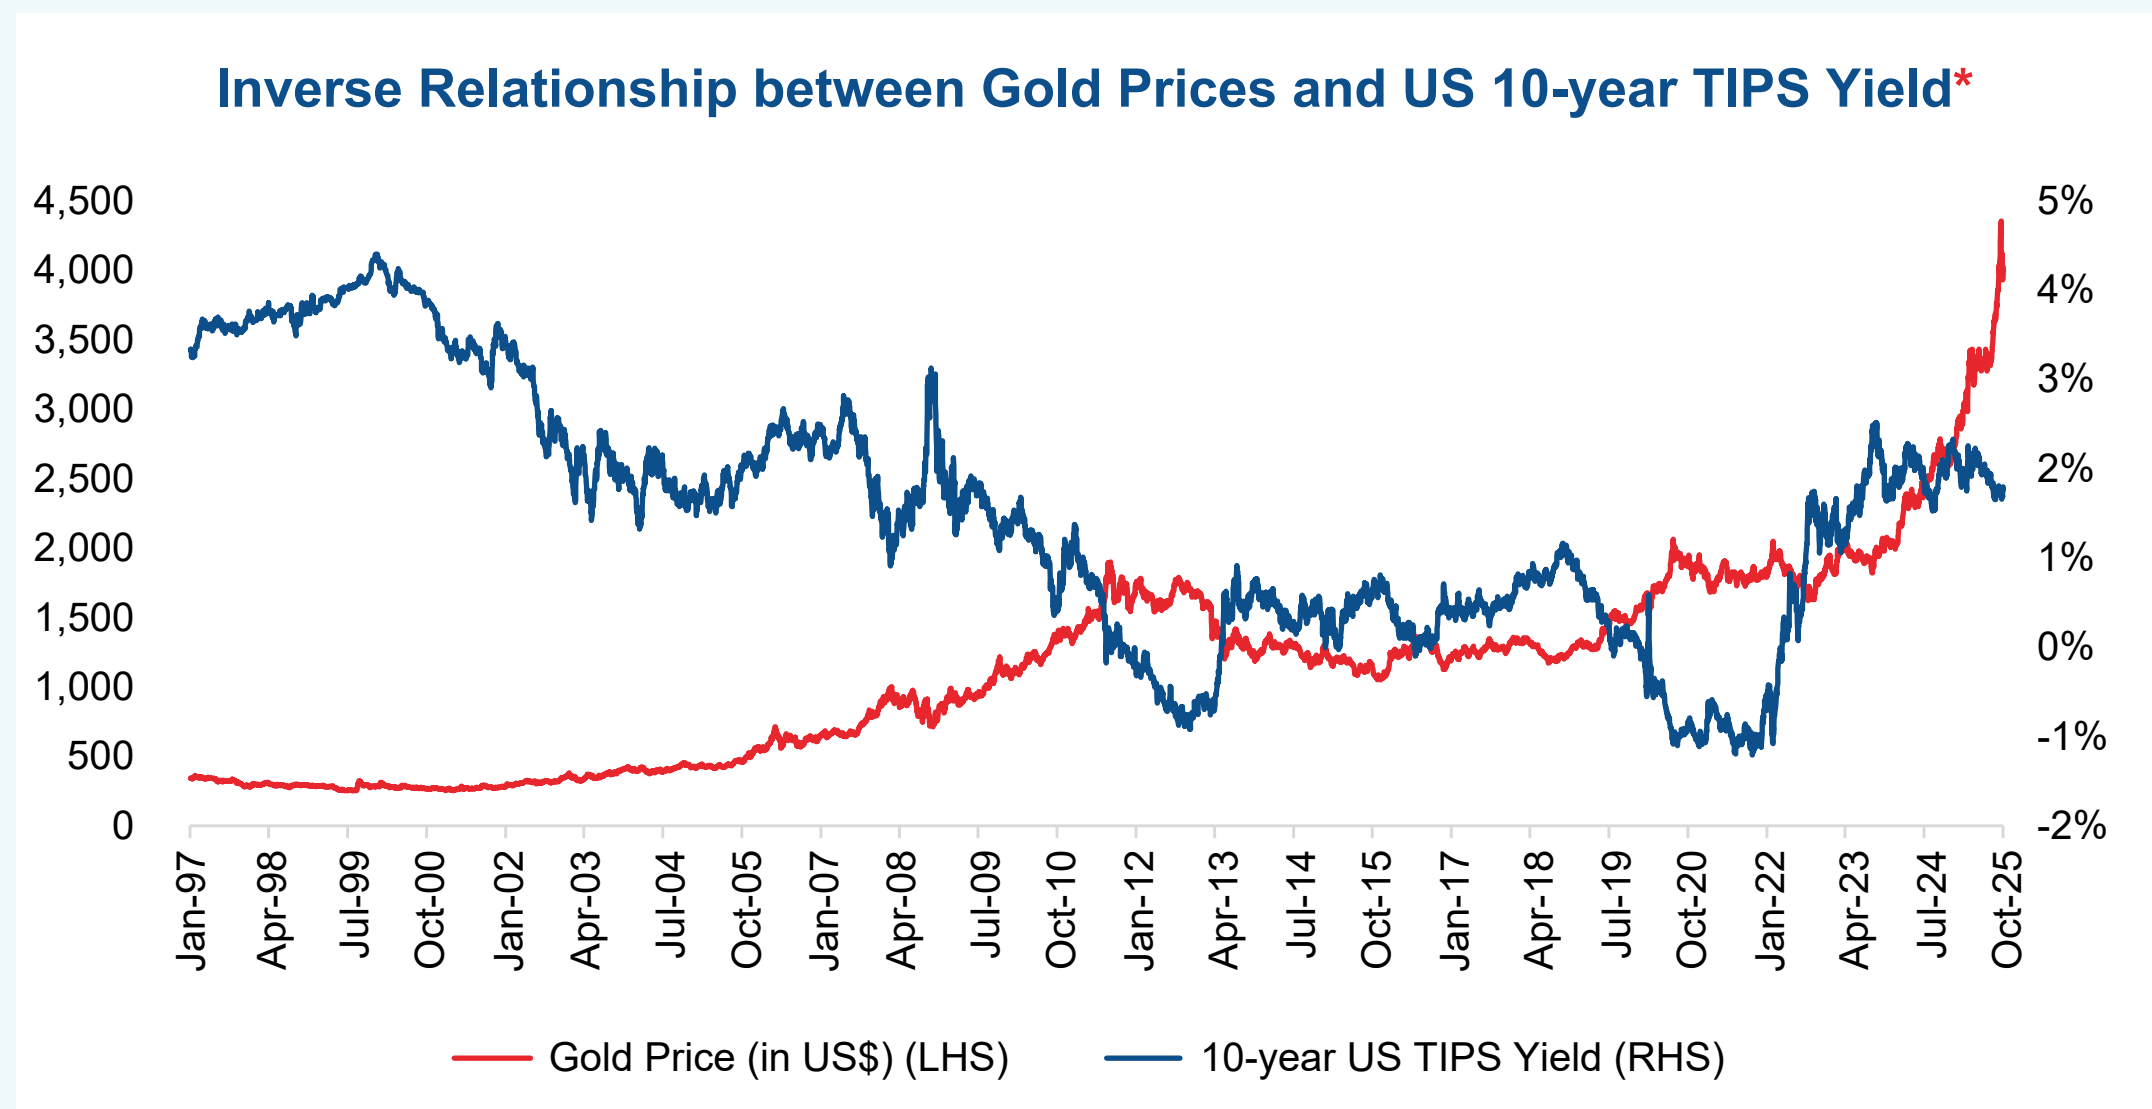

Current Positioning:

Addition of exposure to Corporate Bond Fund (**Rationale:** (a) Corporate bond spreads stand at attractive levels over G-Secs; (b) Falling inflation, front loading of policy rate cuts and indication by RBI that further space has opened to support growth could help in keeping yields rangebound with a downward bias)

- Gold prices and real interest rates indicated by Treasury Inflation Protected Securities (TIPS) → **Negative correlation witnessed historically**
- Indian Gold Prices → Returns in Indian factor in currency movement vs US\$, taxes and duties levied by Government

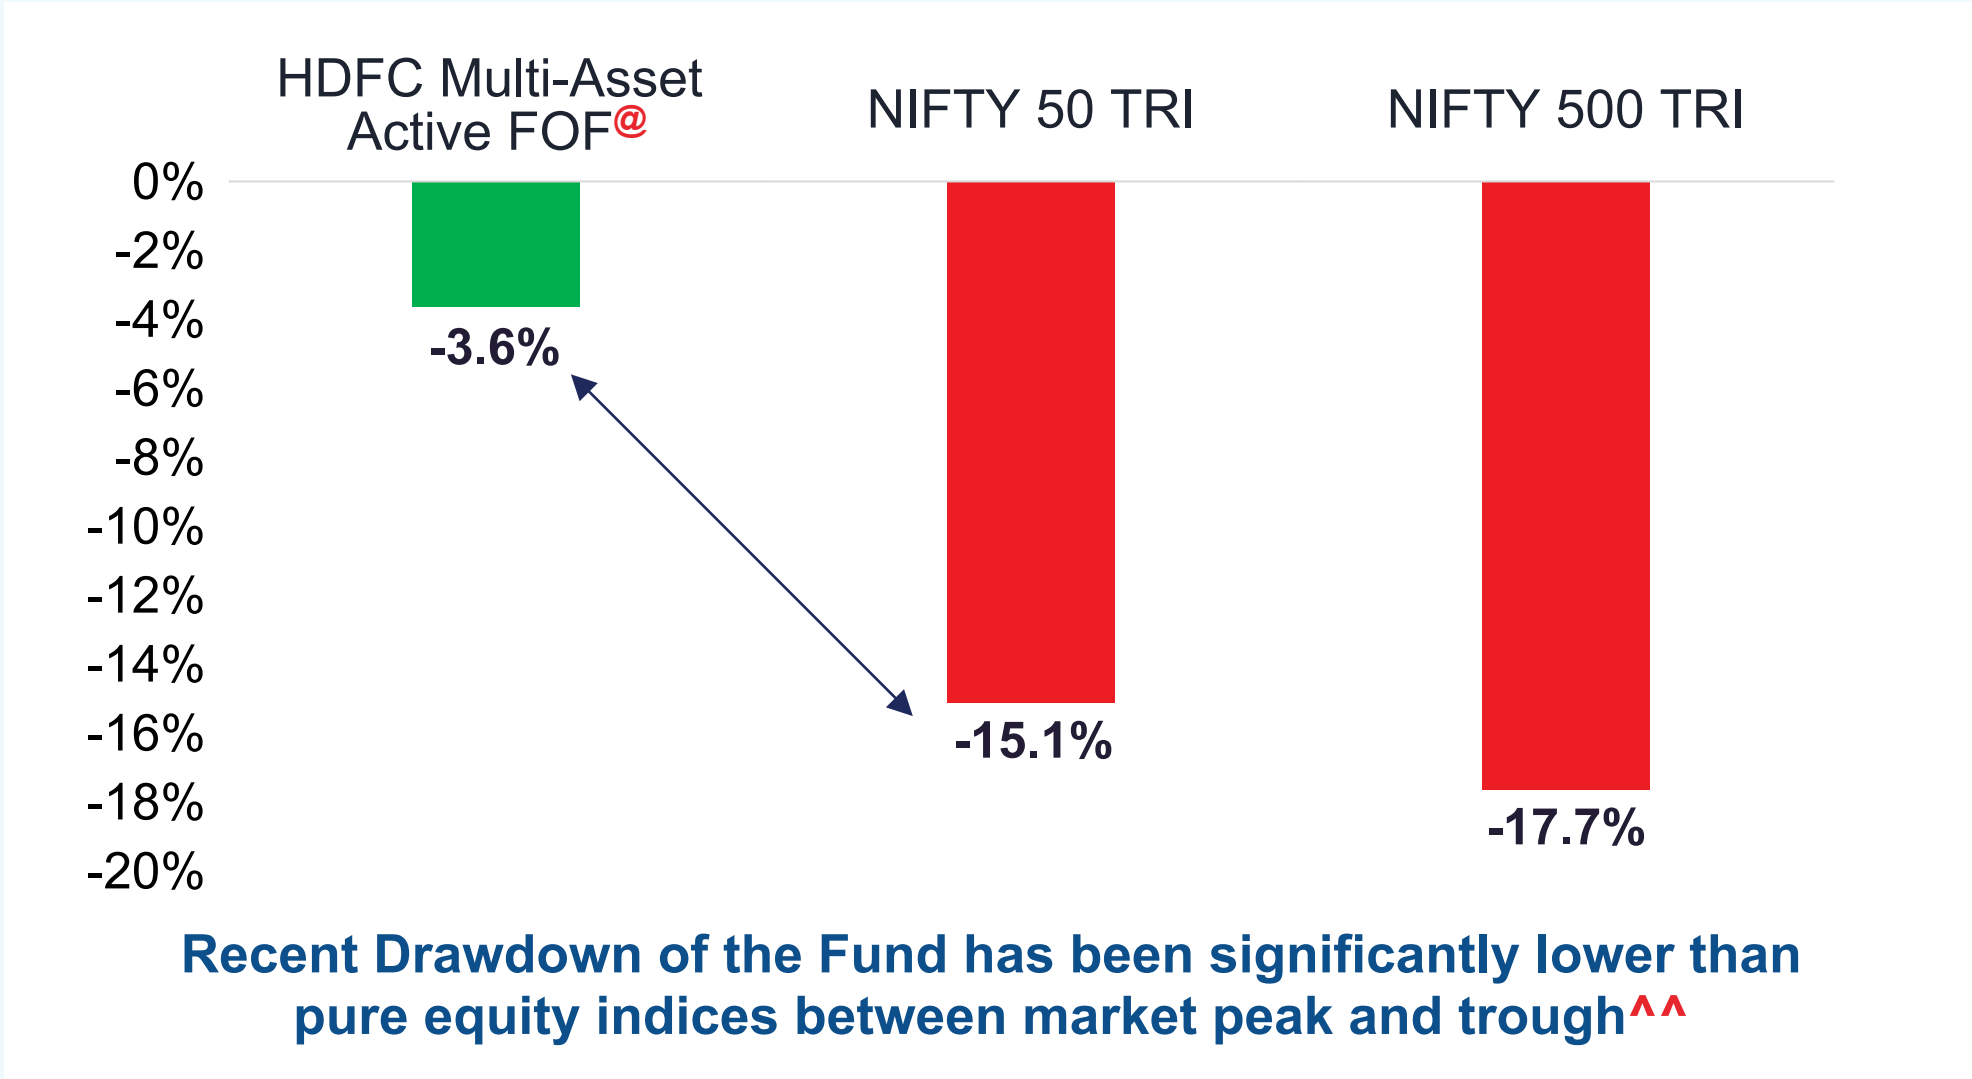

Current Positioning:

Allocation to Gold has been tactically reduced on account of the sharp rally witnessed in Gold prices (**Rationale:** Geopolitical risks and uncertainty created by the external environment on different countries could have been a primary factor behind the rally in Gold prices in the recent past)
